Summary

We are working on a e-commerce site for selling patches and accessories such as belts and zippers for student overalls. It is intended to be dynamic with a fully functional content management system.

For educational purposes Ruby on Rails was chosen.

Scrum planing was done at Trello.com and GitHub.com was used as VCS.

User stories was set up to define what functionality we wanted the site to have. From this the database schema was defined. The user stories were then broken down into Scrum stories and tasks, given importance and time estimates. Some basic test cases were added.

The biggest challenges were time-estimates and scope-creep.

We decided not to try to implement any payment methods. Sales campaigns, though drafted, were later dropped.

Methodology

First a quick mock-up was done. From this user stories was drafted to see what kind of functionality should be included. The functionality were translated to the first draft of a database schema by identifying all nouns and writing them on Post-Its. Every noun became an entity, a table, and was given properties. Relationships were mapped and where there was a many to many relationship connecting tables were added.

The user stories were then broken down into backlog stories, which were further broken down into tasks. Every story was given an importance rating and a time estimate. New, improved design mock-ups were drafted for frontend-oriented stories.

Halfway through each sprint the sprint backlog was reviewed and stories were re-prioritized and re-estimated. After each sprint a sprint-review was held, and before every sprint started a sprint planning meeting was held, reworking the product backlog and adding tasks that had come up during the preceding sprint.

User stories

Register an account

1. User arrives at the page. Figure 8
2. An unregistered user can only browse the site if the user tries to use any functionality he will be taken to the login page which will let him register. Figure 9
3. User provides minimal amount of info needed for an account. Figure 10
4. On successful registration the user is greeted with a message and can now start using the site fully. Figure 11

Edit profile

1. By pressing the "Profil" button in the menu the user can access his profile. User sees that his full profile isn't filled in, so he presses "Ändra" (change). Figure 12
2. This brings the user to the profile editing page, where he can fill in the rest of his information. Figure 13

Place order

1. The user browses the categories and finds something he likes, in this case patches. He does not, however know what kind of patches he's interested in so he presses patches, which renders all products of the subcategories as well. Figure 14
2. The user finds a product he likes and can either add it to his cart directly or click the product and be brought to the product page, containing more information.
3. In this case he wants to know a little more about the product. He's taken to the product page where he can read some more info, see the rating of the product or read reviews from other users. Figure 15
4. After browsing for a while and adding some products it's time to check out. He clicks "Kundkorg" to review his cart. Figure 16
5. After checking that everything is correct he presses "Kassa" and is taken to the checkout
6. To place an order an address has to be given. Since this user has filled in his full profile information his address is sourced from the profile, but could be changes by the user if he wishes this order to be delivered somewhere else. 17
7. Upon completion the user is greeted with a success message and an order confirmation. Figure 18

Adding a review

1. The user has received his products and now wishes to add a review to it.
2. He goes to the product he ordered. 20
3. Here he can either leave just a rating, or as in this case add a review. He cannot, however leave a review without giving a rating.
4. Upon completion he is greeted with a success message and can control that the review is correct.
5. If, in the future, the user would change his mind about the product he can go back and either change or remove the review. 21

Changing something as an admin

1. An admin signs in just as a regular user. Figure 9
2. After signing in the admin is greeted with some changes in the interface for a more streamlined experience for changing things. Figure 22

User roles

Användare

- Butiksadministratör
 - r/w priser
 - r/w kampanjer
 - r/w lagerstatus
 - r/w kategorier
 - r/w reviews (for cleaning up spam)
 - r leveransstatus
 - r kundinfo
- Lagerarbetare
 - r/w lagerstatus
 - r/w leveransstatus
 - r kundinfo
- Inloggad kund
 - r/w sin egen kontaktinformation
 - r/w own reviews
 - r other customers reviews
 - lägsa sin egen orderhistorik
 - lägsa sortimentet (produkter, priser, kampanjer, lagerstatus)
 - läggga ordrar
 - Spara/skicka kundkorg

See Figure 1 - 3

System architecture

During development we run the system on Ruby on Rails' (RoR) built in web server Puma and SQLLight3 for simplicity, but intend to move to a MariaDB database and a Nginx web server with Phusion Passenger for RoR. We host the servers ourselves because it seemed fun, educational and fairly simple.

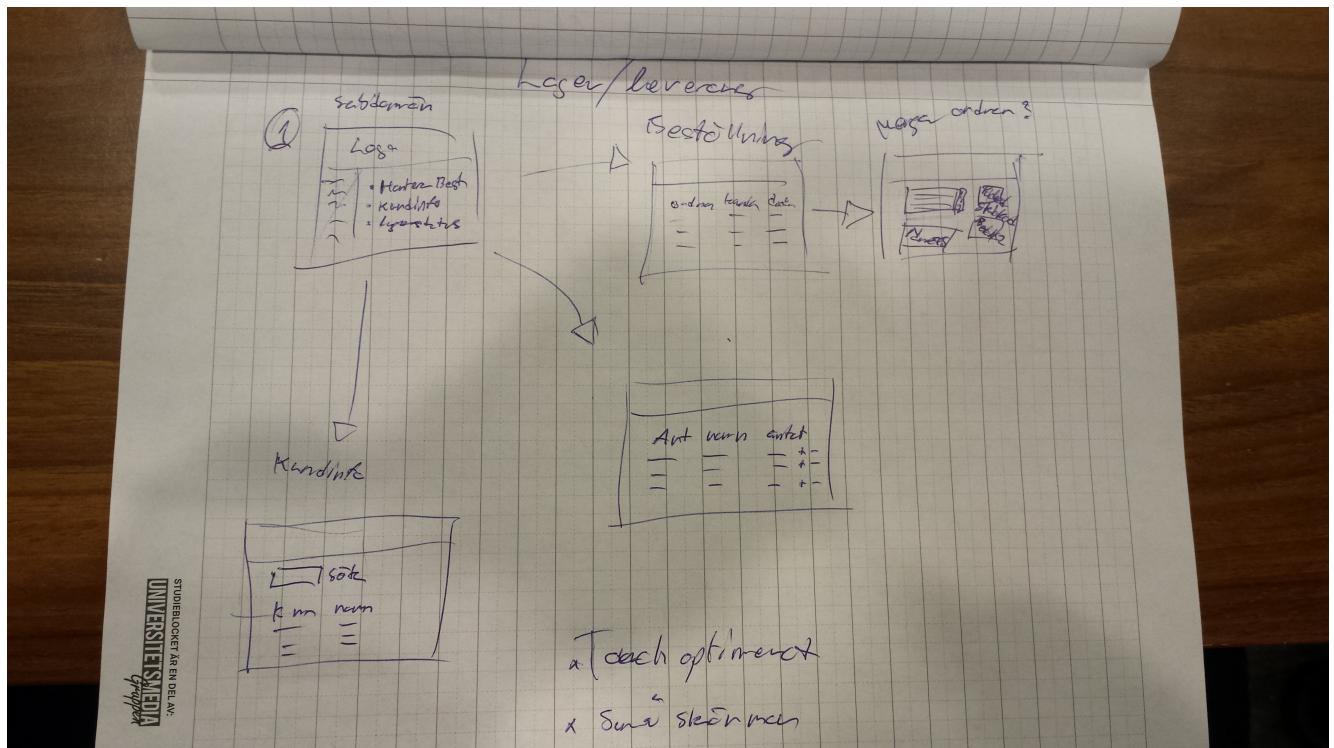

Figure 1

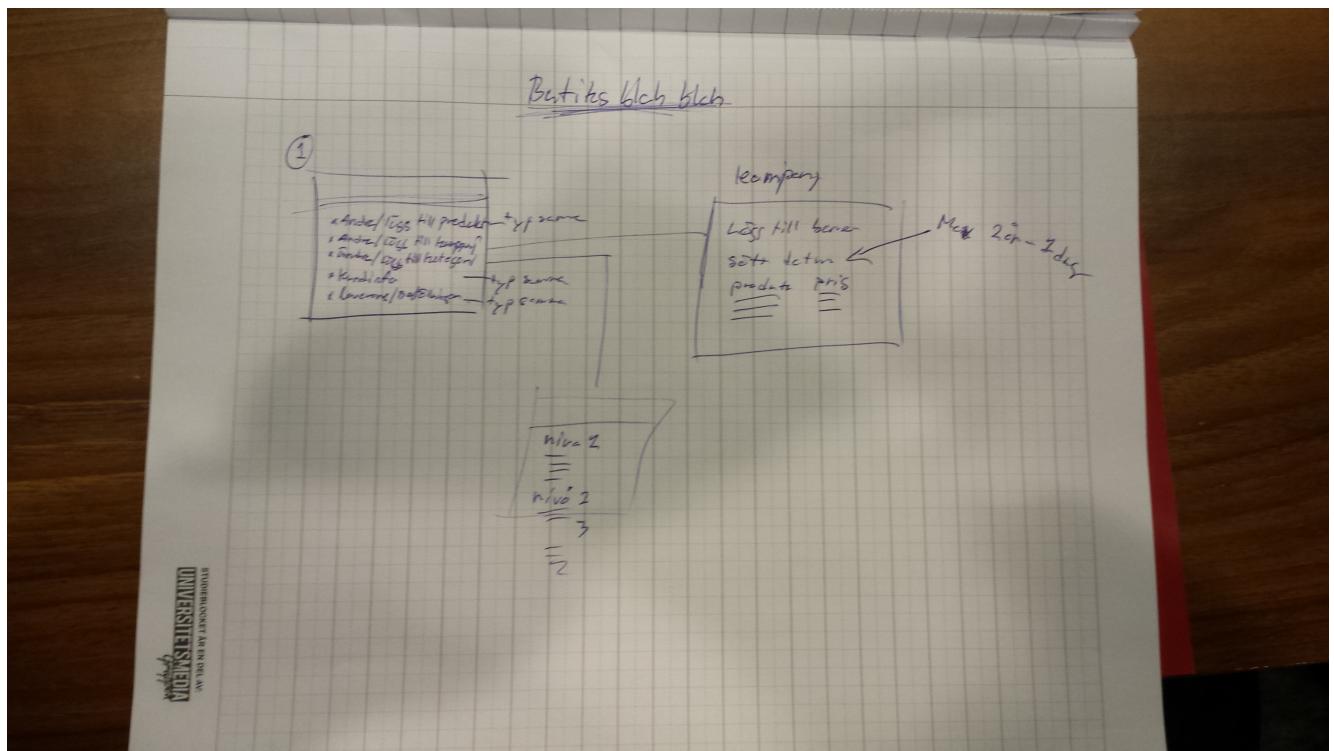

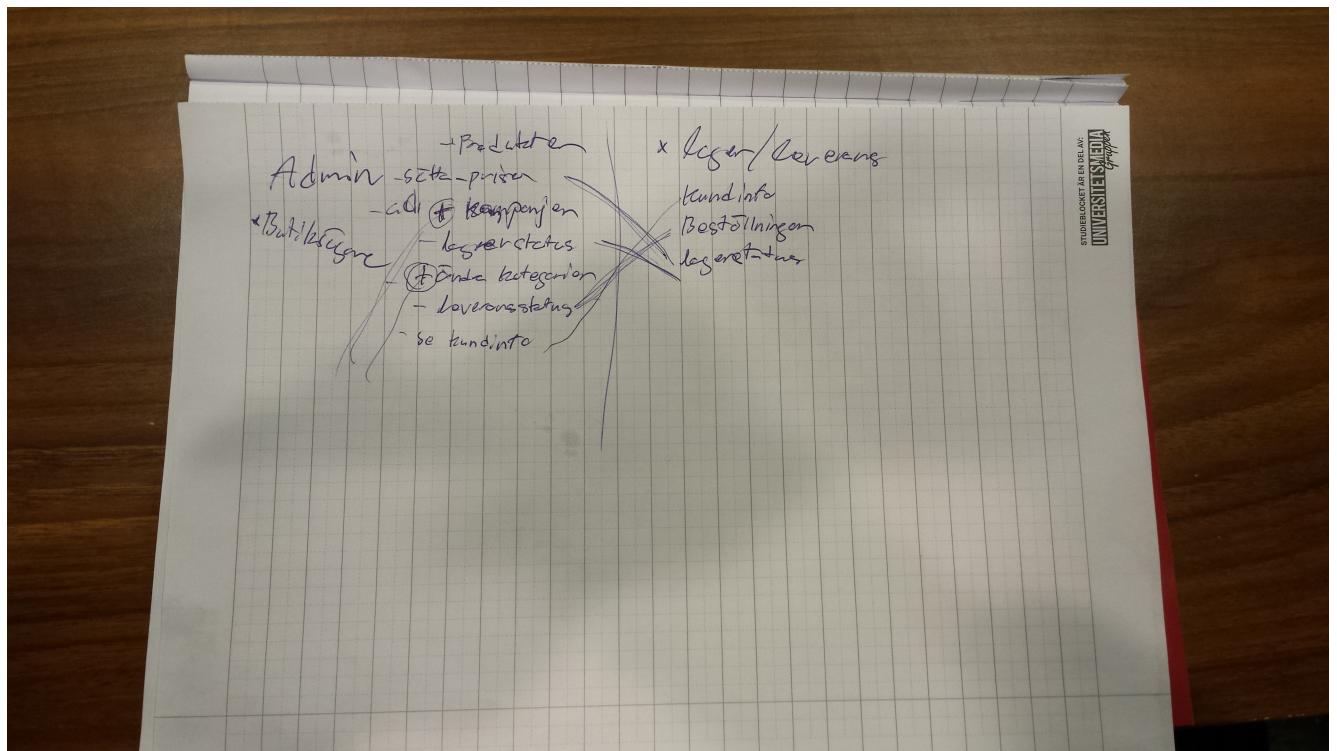

Figure 2

**Figure 3**

Backlog

The backlog was made after discussions after breaking down the user stories into backlog stories, which were further broken down into tasks. They were then given priorities and time estimates. We tried to have a sit down halfway through every sprint to see if any stories needed to be broken down into smaller stories or if some stories needed to be combined. After that the stories would be re-prioritized and re-estimated.

These backlog items were dealt with during this (last) sprint. Figure 5 includes a snapshot of the scrum board at the end of this sprint.

#	Sprint 4	Priority	Time est.
301	Startsida	100	2
302	Dynamisk meny frÅen kategorier	90	2
304	Produktsida	110	4
305	Kundkorg	80	8
307	Profilsida (kundkort)	45	2
308	Orderhistorik	45	1
309	Kundinlogg	50	2
310	Registrering	60	4
312	kommentarer/betygsÅttning	70	8
313	Produktkategorier	75	2
400	Backendinloggning	25	2
1	Personnummer -/+ hantering	5	1

These stories were put on hold and eventually scrapped from the project.

#	Left in backlog	Priority	Time est.
410	Kampanjhantering	10	3
311	ProduktsÅukning	45	1
306	Betalsida	5	12

Planing is done at Trello.com <https://trello.com/b/JxDCHBcm>

This is just a small section of the backlog. For history of all sprints and deeper explanation of the backlog items, refer to Trello.

Database schema

See Figure 6

Code

All code is available at github. <https://github.com/nikalas/D0018E-Databasteknik.git>

Test case specifications

Problem: Item out of stock?

A customer adds a product to the basket. If the product goes out of stock before checkout, how is this handled?

Solution:

At checkout a check is made if the product is still in stock. If not the customer is brought back to the "carts" page and asked to remove the product that is no longer available and that the cart has to be updated.

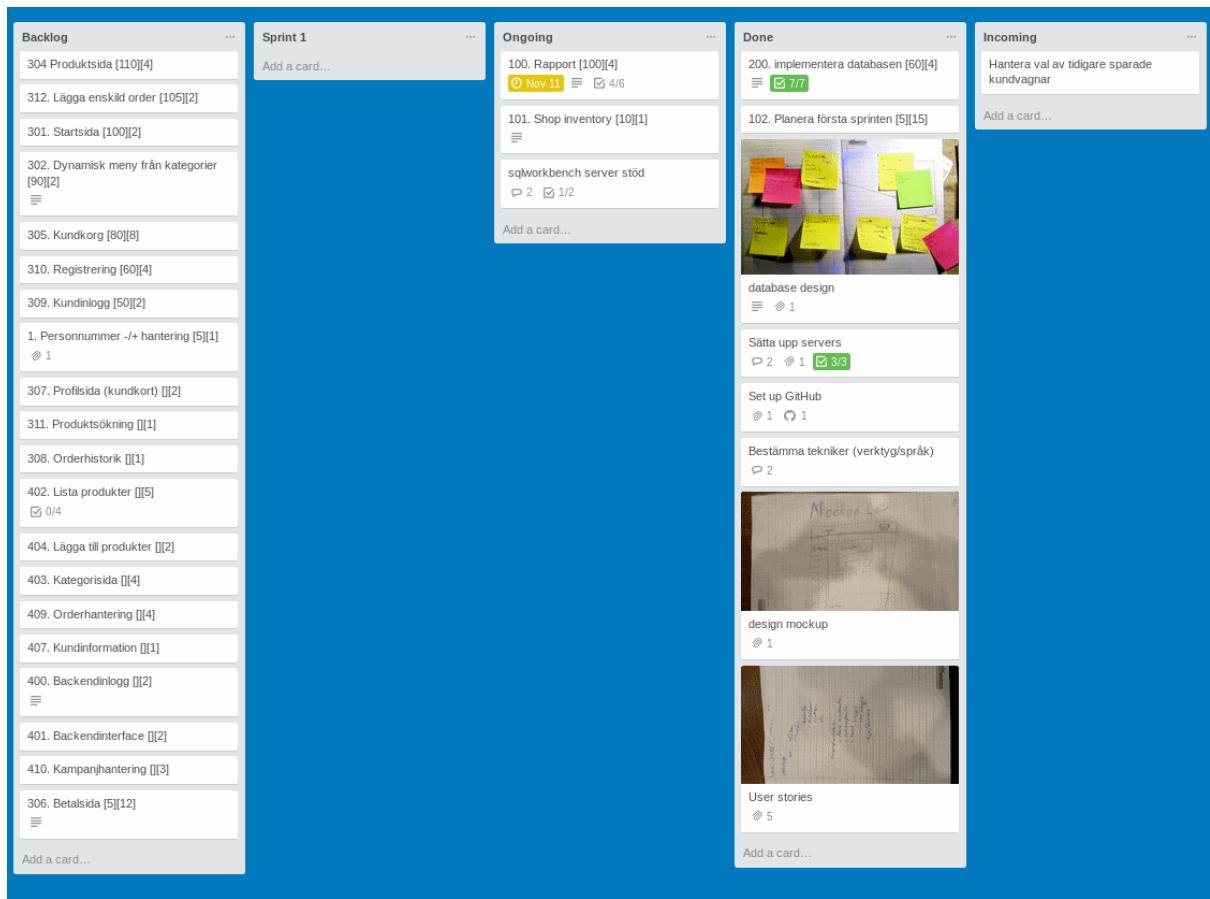

Figure 4: Screenshot of the scrum board going into the second sprint.

Limitations and improvements

We decided to put off saving payment methods and/or information. Might end up re-adding it to the backlog if it looks like we will have time to spare. Non-registered customers have also pretty much been put on hold for now. Products search, sorting, sale campaigns, and uploading pictures through the backend has also been put on hold, since we didn't have time to fully implement them. In a few places the internal quality is suffering and some refactoring could most certainly benefit the code.

Challenges and problems

The greatest challenges were no doubt time estimates and scope-creep. As you learn more, you want to add more, risking not making the deadline and letting other features fall behind. Another problem we had was that RoR's ActiveRecord does a whole lot for you. This means that you can set everything up really good in the rails models, but the actual database isn't very well optimized. Another problem we had was that even though there are some unit tests in place, it's easy to forget to do manual testing. When you're working on a deadline this makes quite some bugs slip through which resulted in us having to spend the entire last 24 hours before hand-in with testing and bugfixing. And there were a few (see

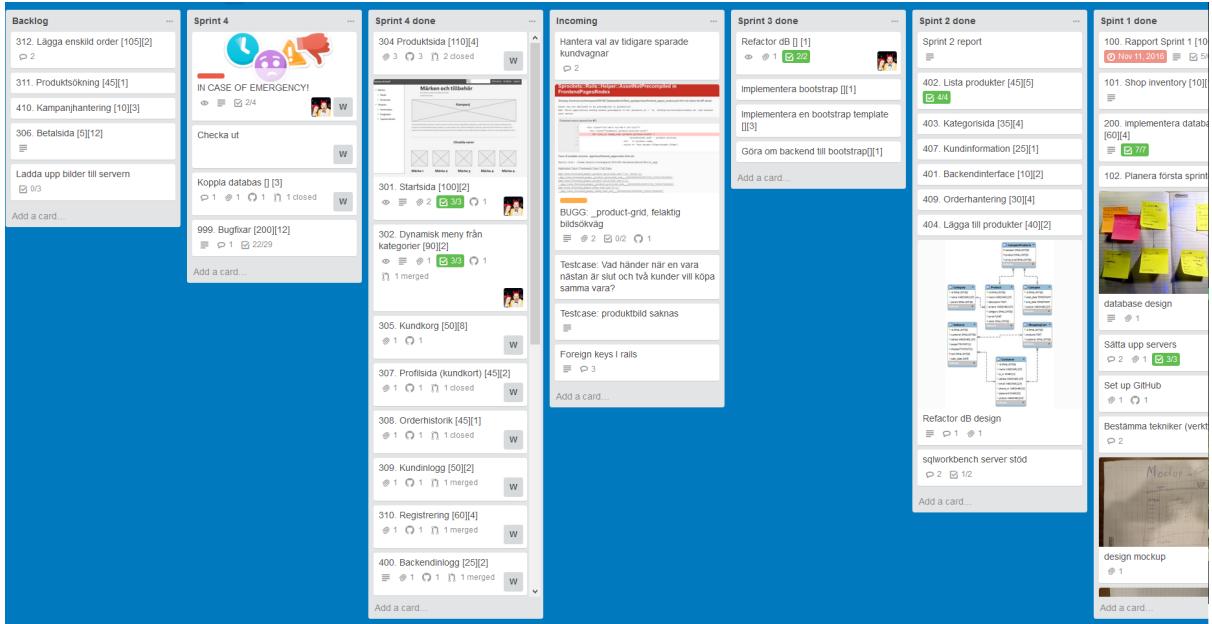

Figure 5: Screenshot of the current state of the scrum board.

figure 7). We did manage to get them down from 28 to 6, most remaining being purely superficial though. All in all thought we didn't really have any big problems. Probably because we did a lot of structured planning going into the project.

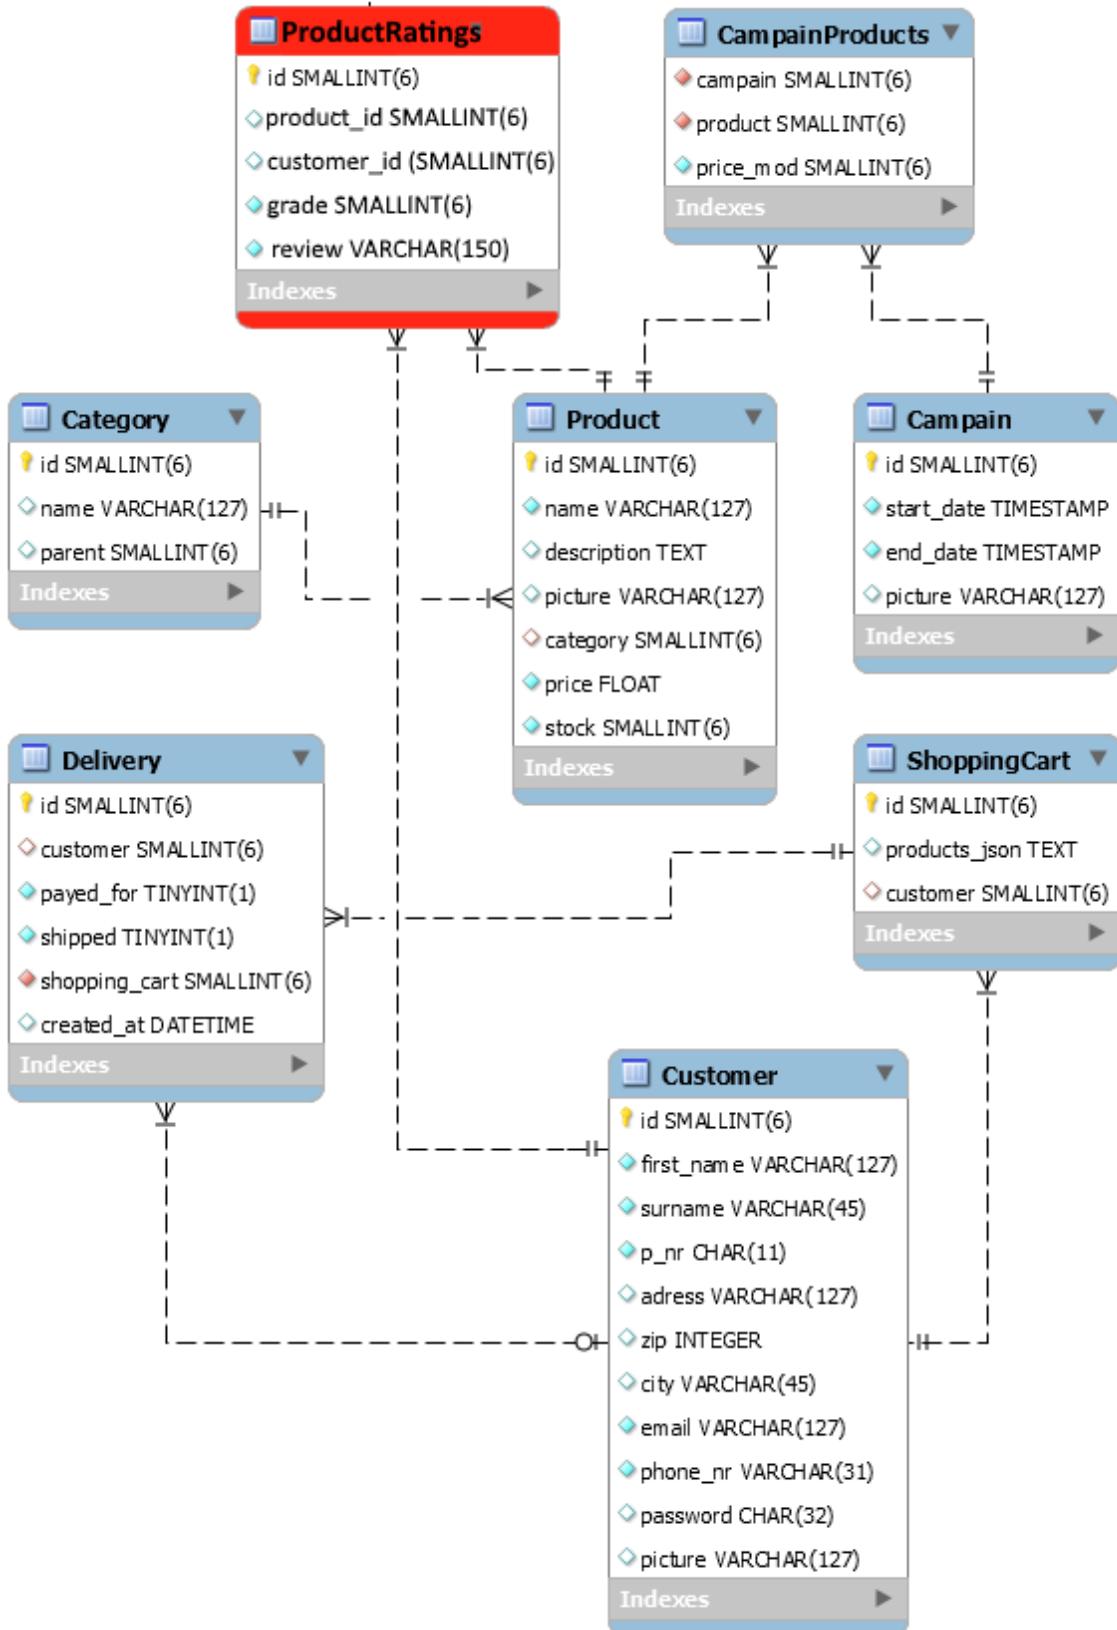

Figure 6: Database design. (not including reworked ShoppingCart)

Description [Edit](#)

Current bugs *found* in the D0018E project. Shouldn't actually be here but on their respective cards. Still, collecting them all here for the sprint final burndown kind of made sense.

Figure 14: Category page

The screenshot shows a product page for a Carlsberg patch. At the top, there's a navigation bar with links for 'Inköplista', 'Profil', 'Logga ut', and 'Checka u...'. On the left, there's a sidebar with categories like 'Märken' (Vävda, Broderade) and 'Tillbehör' (Dragkedjor, Karbinhakar, Capshanddukar). The main content area features a large image of the patch, which is a green rectangle with the 'Carlsberg' logo and the text 'Probably the best Lager in the world'. Below the image, the price is listed as 'Pris: 60.00kr' and the 'Lagerstatus' is '13st'. There's also a shopping cart icon and a rating section showing 'Snittbetyg: ★★★★☆' and 'Antal betyg: 12'. A descriptive text below the patch reads: 'Har du spillt en Calle? Ingen fara, med denna capshandduk är det bara att torka upp och hälla tillbaks i glaset.' Below this, there's a review form titled 'Lämna omdömme' with fields for 'Grade' (a dropdown menu), 'Review' (a text area), and a 'Create Rating' button. Two reviews are visible: one by 'Nick' (5 stars, posted 6 days ago) and one by 'nikalas' (4 stars, posted 6 days ago).

Totalt: 100.66kr

[Kassa](#) [← Checkout](#)

Figure 16: Shopping cart

The screenshot shows a web browser window for the 'Patches-N-Stuff' website. The title bar includes 'Lägg order | Patches-N-Stuff' and a '+' button. The main content area has a dark header with 'Patches-N-Stuff' and navigation links for 'Inköpsslista', 'Profil', 'Logga ut', and 'Checka u...'. On the left, there's a sidebar with categories like 'Märken' (with sub-options like 'Vävda', 'Broderade'), 'Tillbehör' (with sub-options like 'Dragkedjor', 'Karbinhakar', 'Capshanddukar'), and a 'Totalt' section showing '100.66kr'. The central part of the page is titled 'Lägg bestälning' and displays a table of items with columns 'Produkt', 'Antal', 'Pris', and 'Totalt'. The table data is as follows:

Produkt	Antal	Pris	Totalt
Svart metall	2	40.0	
Billig stålhake	1	4.99	
Blå karbinhake	1	12.0	
Grön karbinhake	3	36.0	
			100.66kr

Below the table, there's a section titled 'Fakturerings och leveransadress' with fields for 'Adress' (somewhere), 'Zip' (12312), and 'City' (nowhere). A red note on the right says: '← Automatically sourced from user profile if provided, but can be changed if user so wishes for every order.' There's also a 'Update Delivery' button. At the bottom, there's a 'Produkt' column header followed by a table row with 'Antal' and 'Pris' columns.

Figure 17: Order page

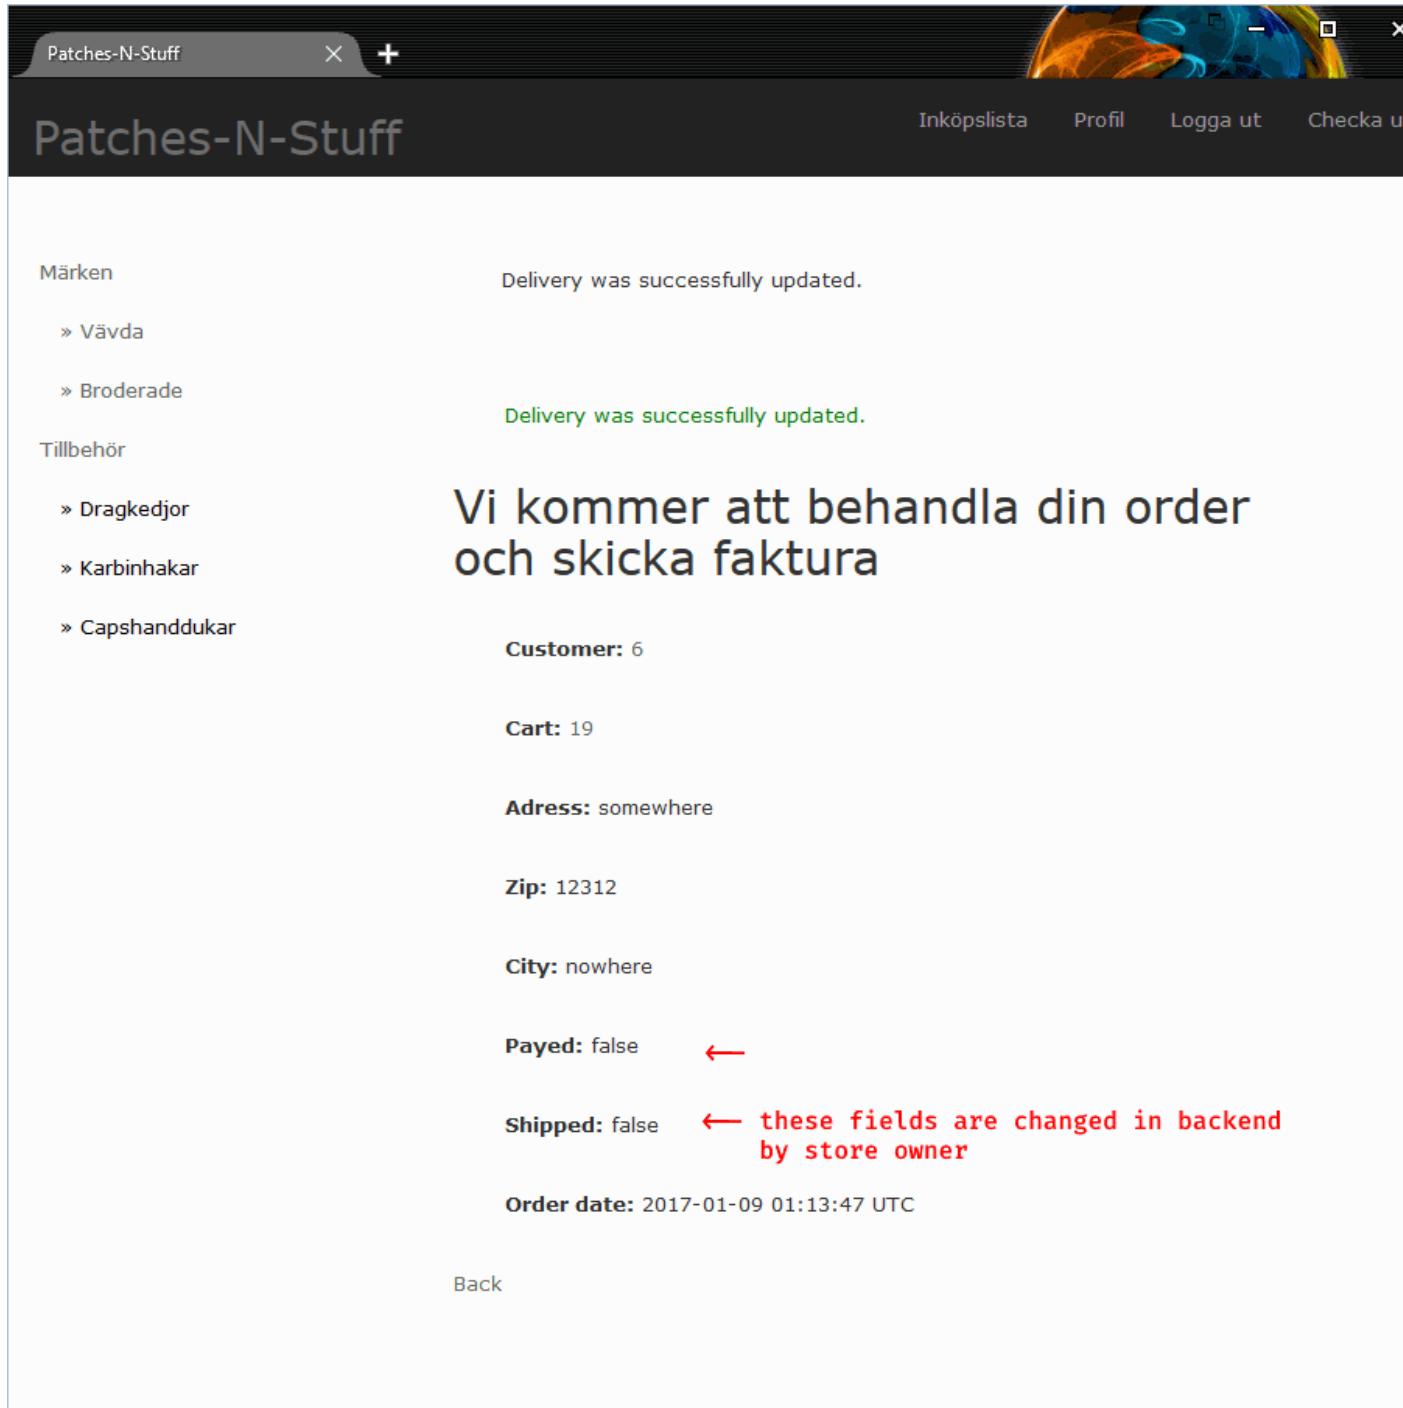

Figure 18: Order confirmation

The screenshot shows a web browser window for the website "Patches-N-Stuff". The header includes the site name, a search bar with placeholder text "Sök", and navigation links for "Inköplista", "Profil", "Logga ut", and "Checka u...". On the left, there's a sidebar with categories like "Märken" (with links to "Vävda" and "Broderade"), "Tillbehör" (with links to "Dragkedjor", "Karbonhakar", and "Capshanddukar"), and a "Nyhet" section. The main content area is titled "Ordrar" (Orders) and displays a table of order history:

	Ordernr	Datum	Summa	Betald	Skickad	Adress
